

ADITH CHANDRAN A

9567147620 | adithchandran2004@gmail.com | github.com/Adithchandran2004 | linkedin.com/in/Adithchandran2004

EDUCATION

School of Engineering, CUSAT

B.Tech Computer Science & Engineering, CGPA: 8.57

3rd Year

EXPERIENCE

Stroxx Technologies

May 2025 – June 2025

AI/ML Intern

- Developed a content-based music recommendation system using word frequency similarity techniques
- Implemented comparison logic to analyze textual features and generate relevant music suggestions
- Integrated recommendation engine with React (Vite) frontend for real-time interaction
- Gained hands-on experience in machine learning workflows and real-world AI applications

Keltron

May 2024

Django Intern

- Learned core Django concepts including project structure, apps, and request-response cycle
- Built basic web pages and implemented navigation by connecting multiple views and URLs
- Worked with templates to render dynamic content and manage page flow
- Developed simple web applications to understand backend development fundamentals

PROJECTS

loanCopilot — AI Loan Automation Platform | *Next.js, TypeScript, MongoDB, Mastra, Gemini API*

- Built a production-grade AI web application to automate end-to-end loan processing using a conversational agent
- Designed a stage-based workflow (Sales → KYC → Credit → Loan Selection) with dynamic state transitions
- Integrated LLM-powered agent (Google Gemini) for intelligent user interaction and decision-making
- Implemented OCR pipeline using Tesseract.js to extract financial data from identity and salary documents
- Developed RAG-based policy search using MongoDB Vector Search for real-time query answering
- Built secure authentication system using JWT stored in HTTP-only cookies
- Automated loan document generation using PDFKit for instant application output
- Performed real-time financial analysis including FOIR calculation and credit evaluation

Music Recommendation System | *React (Vite), JavaScript*

- Developed a content-based recommendation system using word frequency and similarity comparison
- Implemented logic to analyze song features and dynamically recommend similar tracks
- Built a responsive frontend using React for seamless user interaction
- Integrated recommendation pipeline with UI for real-time suggestions

Football Tactics Planner (Ongoing) | *Flutter, Dart*

- Developing a mobile application to design and visualize football tactics and formations in an interactive interface
- Implementing drag-and-drop functionality to position players dynamically on the field
- Designing intuitive UI components using Flutter for smooth user experience and real-time updates
- Working on features to save, edit, and manage multiple tactical setups for analysis and reuse

TECHNICAL SKILLS

Operating systems: Windows, Linux

Languages: Python, C, C++, Java, PHP

Frontend: HTML, CSS, JavaScript, React, NextJs

Backend: Django, NextJs

Databases: MongoDB, MySQL

Tools: Git, VS Code

LANGUAGES

English (Fluent) Malayalam (Native)
